

Fedrigoni

RECYCLASS TECHNOLOGY APPROVAL

Brussels, 07 September 2023

DISCLAIMER

RecyClass recognition applies only to Fedrigoni 'PP White with acrylic emulsion PSA' technology reported in Annex I. The recyclability assessment therefore does not refer to the testing of a specific packaging using this self-adhesive label. Any specific packaging using this self-adhesive label would need to be tested individually to demonstrate that the system of resin, adjuvants, label, closure, and printing conforms to the RecyClass Recyclability Evaluation Protocol for PP containers, and that it is sorted in the PP rigid stream at the state-of-art sorting plants in Europe.

Publication of results of testing of this technology MUST clearly include all the conditions listed in the approval letter. Partial reporting of the conditions is forbidden.

Additionally, any change in the formulation of the technology must be communicated to the Technical Committee which will reassess the approval of the technology.

The RecyClass PP Technical Committee was requested to carry out an assessment of the technology 'PP White with acrylic emulsion PSA' by Fedrigoni to verify its impact on the quality of recycled PP containers.

The technology is a white PP-based self-adhesive label applied on a natural PP bottle, without cap. The self-adhesive labels are composed by a PP facestock and an acrylic emulsion adhesive. The adhesive represents about 1 % of the total weight of the tested bottle whilst the PP facestock accounts for 2.2 wt%. The labels were tested unprinted.

According to the results that were obtained from the laboratory tests done by the Institut für Kunststofftechnologie und -recycling (IKTR), carried out as per the Recyclability Evaluation Protocol for PP containers, 'PP White with acrylic emulsion PSA' technology is considered to be **limited compatible with coloured PP recycling.**

Based on these results, RecyClass acknowledges that Fedrigoni 'PP White with acrylic emulsion PSA' technology will have a limited impact on the current European coloured PP containers recycling and provided that the full packaging using this self-adhesive label is designed under the following conditions:

- a) The packaging is made of PP:
- b) The facestock of the self-adhesive label(s) applied on the packaging is made of clear or white PP;

- c) The amount of acrylic emulsion adhesive represents 1 % of the total weight of the packaging, or less;
- d) The final density of the packaging is lower than 1 g/cm³;
- e) Any additional components, such as closure system are made of PP, preferably clear or white;
- f) Any additional component or features (e.g. inks) of the packaging must be compliant with the corresponding RecyClass Design for Recycling Guidelines.

RecyClass concludes that Fedrigoni 'PP White with acrylic emulsion PSA' technology as per current market conditions and knowledge, is limited compatible with the existing European industrial recycling processes for coloured PP containers. Indeed, the recycled plastic generated after the recycling process was successfully tested in high-value application such as PP bottles up to 50% concentration¹.

In regard to RecyClass Recyclability Certification, the present limited compatibility with coloured PP containers recycling approval delivered to Fedrigoni 'PP White with acrylic emulsion PSA' technology, means that a packaging containing the Fedrigoni 'PP White with acrylic emulsion PSA' as mentioned in the aforementioned conditions will be penalised with one Recyclability Class deduction. Moreover, the amount of recyclable PP will impact the final Recyclability Class obtained during Recyclability Certification². Also, it is noteworthy that the presence of additional packaging features could impact the certification process.

It is noteworthy that application of extensive printing on the non-separable self-adhesive label reduces the quality of recycled plastic generated by the container, by limiting its compatibility with PP recycling. This approval is granted for a period of 2 years, during which the applicant will endeavour to improve the self-adhesive label construction to allow its removal during the recycling process, based on RecyClass PP Technical Committee recommendation.

About RecyClass

RecyClass is a non-profit, cross-industry initiative advancing recyclability, bringing transparency to the origin of plastic waste and establishing a harmonized approach toward recycled plastic calculation & traceability in Europe. RecyClass develops Recyclability Evaluation Protocols and scientific testing methods for innovative plastic packaging materials which serve as the base for the Design for Recycling Guidelines and the RecyClass Online Tool. RecyClass established Recyclability Certifications for plastic packaging, Recycling Process Certification and Recycled Plastics Traceability Certification for plastic products.
